### Practice overview

Finola O'Farrell QC specialises in construction, engineering, energy, shipbuilding and information technology disputes, together with related professional negligence, insurance, bonds, guarantees, and health and safety matters.

Finola is not afraid of fighting difficult and challenging cases. Her work often includes cases that involve issues of legal, factual and technical complexity. Recent cases include:

- Disputes in respect of a major PFI rail infrastructure contract;
- Dispute in respect of a PFI waste management facility project;
- Dispute in respect of defects in the design and construction of a commercial property;
- International arbitrations concerning an offshore wind farm project;
- Commercial dispute in respect of an offshore gas pipeline;
- Dispute arising out of a Middle East power plant;
- Disputed calls and injunction applications in respect of performance bonds for infrastructure and technology projects in the Middle East;
- Litigation concerning an advertising concession for the underground network; and
- Professional negligence litigation arising out of the Wembley Stadium project.

She is an accredited mediator and adjudicator and sits as a Recorder.

Finola's expertise covers the full range of contractual and tortious claims arising out of construction projects, including defects claims, termination issues and delay/loss and expense

claims. She has considerable advocacy experience before the English Courts at all levels and regularly appears as counsel in domestic and international arbitrations throughout Europe, Asia and the Middle East (including ICC, LCIA, DIAC, CIMAR rules). She also acts as counsel or tribunal in arbitrations, adjudication, mediation and expert determination.

She has over 30 years experience of advising and fighting cases in respect of all internationally recognised forms of construction, engineering and shipbuilding contracts, including JCT, FIDIC, NEC, MF/1 and IChemE. Finola has extensive experience of PFI, PPP and government contracts relating to major infrastructure projects such as airports, railways, roads and bridges, telecommunication systems, tunnels, prisons, hospitals and schools. She has considerable expertise in claims relating to the construction of assets for the oil, gas and nuclear industry including power stations, drilling platforms, jack up rigs, FPSOs, offshore and onshore pipelines, berthing facilities and decommissioning issues. Her expertise in technical marine engineering matters includes international shipbuilding disputes, offshore wind farms, sea defences and dredging projects.

Finola's particular strengths are her speed in working through dense, technical documents so as to provide swift and concise advice, the ability to develop a strategy that can change the direction of a case, a hands-on approach to fighting cases, recognising that she is a member of a team in which everyone has a valuable role, and skilful cross-examination (in a recent arbitration, Finola was required to cross-examine eleven experts of differing disciplines, up to three experts together).

---
